

ABSTRACT OF THE DISCLOSURE

This invention has as its object to inform the user before completion of a print process of a digital image that a cable can be disconnected from a digital camera or printer, and the digital camera is ready to photograph. To this end, a PD printer (1000) of this embodiment transmits a JobDataDone command indicating that all digital images to be printed are received to a digital camera (3012) (909). Upon reception of the JobDataDone command, the digital camera (3012) displays, on a display (35), information indicating that a cable (5000) can be disconnected from the digital camera (3012) or PD printer (1000).
